PROJECT EXPERIENCE

ShopByAisle Application (Current LaunchCode Project) — Mobile Web App

- ShopByAisle is a mobile web application to make shopping experience from store hassle free and fast.
- Our application stores items and their aisle locations, then shares them with all of our users. When you locate an item, that's the power of crowdsourcing.
- Using Google map technology to locate your nearby stores and add them to your favorite Stores list for the purpose of adding aisles.
- Sorting Shopping list by aisle/store for faster and easy shopping.
- The application is build on latest and greatest technology stack:

  Frontend:, Javascript, Html, CSS, ,BOOTSTRAP, jquery, Ajax, Google Map API
  Back End : C#, ASP.NET Core MVC
  Database : Sql Server
  Tools : Visual Studio

Tech Job Search (LaunchCode)- A Job Portal application

- The Job Portal application allows to easily manage data for currently available jobs.
- It consumes the job lists provided by different employers in CSV format in the Job portal.
- Provides ability for candidates and staff to search Jobs, based on Competency, Area and Employer.
  Front End : Html, bootstrap
  Back End : C#, ASP.NET Core MVC
  Database : Sql Server
  Tools : Visual Studio
